1.1. INTRODUCTION

The complementary private social security in Brazil is organized under the Law 109 of May 2001, which has been created in two levels: closed entities, specific for the employees of a certain company or group of companies, and open entities, accessible to whoever¹ subscribes to it and defray their own benefit plan. The closed entities regime or Pension Plans is different from the other one due to several fundamental aspects, among them the fact of not aiming at profit distribution. The capitalization regime under which the Pension Plans are organized is what gives them high vitality and efficiency when compared to the Social Security which is common partition or budget regime.

In the first instance, the participating employee forms entirely the resources which guarantee his benefits during the working period, in such a way that at the retirement age, the whole resource mass will be stored.

The Social Security regime consists in the defraying by a certain generation of the benefits granted to the previous generation.

According to the accumulation of savings, the Pension Plans, besides their purpose activity which is clearly social, have a relevant economical function as investors. They are nowadays in Brazil the support of the stock and of the real estate markets, and are capable of driving forward many other economical segments, offering them long-term financing plans.

The Brazilian Pension Plans have acquired great institutional and conceptual maturity. They are capable of offering to the totality of the Country employees the effective protection against the future uncertainties, generating to the Country, at the same time, a mass of new consumers of great importance for the formation of its domestic market.

1.2. PROFILE OF THE PENSION PLANS

1.2.1. An Achievement of the Working Class

The official system of Social Security in Brazil has not been able to provide employees with guarantees as to the protection of their life standards during retirement, resulting that, implacably, they are ousted of the consumer market at the very moment they put an end to their working period.

All over the developed world, especially in the United States, Germany and Japan, the private complementary system has been the means to solving this dilemma. In Brazil, the Pension Plans regime has been instituted based on these countries experience and it has developed to a level comparable to the best similar systems existing in the world.

It consists of the union efforts of the companies and of their employees for the defraying of the benefit plans, which are always complementary to those of the official system. The employees assisted by the complementary regime are nowadays around 639 thousand¹ in Brazil.

This achievement must be spread to the totality of employees, as other countries have done, so that Brazil may be included in the community of socially responsible nations.

1.2.2. Instrument of Human Resources Policies

Pension Plans constitute an extraordinary instrument for the enhancement of work available to companies. By participating of the defraying of benefit plans, they demonstrate their concern about the reproduction of manpower, with the protection of the employees whose energy has been consumed by the productive process and with the maintenance of the domestic consumer market in the Country. It has been demonstrated that companies which do this have a younger and more productive

¹ ABRAPP – Data as of December/09

staff, because its employees do not hesitate in carrying out their right to retirement as soon as it becomes due.

Employees of non-sponsoring companies hesitate in requiring retirement, afraid of endangering their life standards. As a consequence, their staff grows older thereby blocking the access to the company by younger employees.

The constitution of Pension Plans has increasingly appeared in the order of labor petitory actions in large companies, thus making evident the awareness of the employees regarding the importance of social security protection for them, their family and the country as a whole.

1.2.3. Instruments of Capital Socialization

Pension Plans are also great investors because of their capacity of accumulating large savings, as a result of the capitalization regime which constitutes the fundamental reason for their vitality.

In the United States this system has invested the amount of US\$ 8,4 trillion² in the national economy as well as abroad.

In Japan, the greatest part of exportation financing plans is afforded by the resources of the private complementary social security.

In Brazil the Pension Plans have historically been the support of the stock market, maintaining large portfolios subject to a conservative administration, thus contributing for this market stability.

Besides the investments in the stock market, Brazilian pension plans have financed the main shopping centers in the country as well as innumerable commercial buildings, thus becoming, for many years, a factor of stability in the civil construction market.

These investments, a means activity of the pension plans have the collateral political effect of making the participant employees interested in the economy, and in the development of their companies and that of the Country, because they are indeed the shareholders of the companies in which the pension plans participate.

The development of the mass of resources that constitute the reserves of pension plans will signify an increase of their participation in the capital of many companies – quite a healthy and economically efficient form of socialization.

1.2.4. Entity of Private Law

Pension Plans are private, independently from the juridical status of the supporting company. They are constituted to administer resources paid by employees and employers for the defraying of the benefit plans.

The resources originated from the companies integrate the remuneration "basket" of its employees, such as has been negotiated with them. The totality of the resources in the possession of institutions belongs, therefore, to their participants. This is what grants them the private character, according to Law 109/01 and court practice.
